NEW AT IMTS 2012

LMT Introduces Automated Cutting Tool Laser with Inspection Station at IMTS 2012

Caro, Michigan, June 2012 – Laser Marking Technologies, LLC, a division of The LMT Group is to release its new automated cutting tool laser with optional inspection station, the COBALT® ARL-PI, in September at the IMTS (International Manufacturing Technology Show) in Chicago, IL.

The COBALT® ARL-PI is specifically designed for round shank cutting tools and can easily be extended from an automated cutting tool laser system into an inspection station.

The COBALT® ARL-PI offers options for continuous marking or inspections of a desired number of cycles. The load/unload drawer allows for continuous pallet changing out without interrupting the cycle to help increase productivity. With this universal system, there is no need for tooling change with most standard tools.

Visit the LMT Booth #N-6676 at IMTS 2012 for more information.

The LMT Group strives to bring customers the latest technology in metal marking, laser micro-machining, laser measuring, laser engraving, and laser cutting utilizing the most advanced components in the market today at the most competitive prices. For more information, visit: www.lmtgrp.com or e-mail info@lmtgrp.com.
