NEW AT IMTS 2012

LMT Introduces Diamond™ Series at IMTS 2012

Caro, Michigan, January 2012 – Laser Machining Technologies, LLC, a division of Laser Marking Technologies, LLC, is to release its Diamond™ Series machine in September at the IMTS (International Manufacturing Technology Show) in Chicago, IL.

The Diamond™ Series is the most affordable, micro-machining laser for cold micro-machining of 3D forms, 2D shapes and for many types of materials including but not limited to PCD, CVD-D, CBN, tungsten carbide, rubies, natural and man-made diamonds, and many other exotic and hard-to-machine materials.

- Laser achieves surface precision in all depth ranges with continuous in-process monitoring.
 - Solid State laser for surface qualities up to = 0.6 μ | 0.00003 in.
 - Swiveling monitor for easy setup, yet positions flat against the machine surface to save space.
 - Remains thermally stable with solid granite base and allows for rapid prototyping.
 - Includes easy to use software and imports 3D files with ease.
- Visit the LMT Booth #N-6676 at IMTS 2012 for more information.

The LMT Group strives to bring customers the latest technology in metal marking, laser micro-machining, laser measuring, laser engraving, and laser cutting utilizing the most advanced components in the market today at the most competitive prices. For more information, visit: www.lmtgrp.com or e-mail info@lmtgrp.com.
